Q02 Deeper Project Ideas

1. **Capability-card audit.** Turn one broad model claim into a reproducible capability card with task distribution, metric, baselines, contamination risks, and a failure taxonomy.
2. **Metric-threshold simulation.** Simulate a continuous score curve and compare how exact-match, pass@k, and thresholded metrics change the apparent onset of a capability.
3. **Generalization challenge set.** Build paired examples that preserve an underlying rule while changing surface wording; evaluate rule-based, retrieval, and model baselines.
