# Q15: Project Suggestions

DLS 2026 — Kukla

October 2026

1. **Build a tiny RAG (small, 2–3 days).** Extend `tiny_rag.py` with a real embedding model and a small document set; measure answer grounding with and without retrieval.
2. **Lost-in-the-middle replication (medium, 3–5 days).** Place a needle fact at varying positions in a long context and measure retrieval accuracy vs. position; reproduce the U-shaped curve.
3. **Agent memory (larger, 1–2 weeks).** Implement a conversation-memory layer that summarizes old turns and re-injects relevant facts; evaluate whether it preserves useful information across sessions better than a fixed sliding window.
