Q25: Project Suggestions

DLS 2026 — Kukla

October 2026

1. **Distillation (medium, 4–6 days).** Distill a larger model's outputs into a smaller student on a task; measure the student's gain vs. training on ground-truth labels alone, and where the teacher's errors propagate.

2. **Judge-bias audit (small–medium, 3–5 days).** Quantify length bias, position bias, and self-preference in an LLM-as-judge setup; propose and test mitigations (randomized order, length normalization).

3. **Collapse experiment (medium, 1 week).** Iteratively retrain a small generative model on its own outputs across generations; measure diversity/quality decay and how much fresh real data arrests it.
